WATER & WASTEWATER

WEDECO BX Series Closed Vessel UV Reactors

For drinking water applications

Engineered for life

DESIGN: The reactors of the UV disinfection series BX are equipped with low pressure / high intensity UV lamps, which are arranged parallel to the water flow inside the reaction chamber. The most powerful Spektrotherm® HP lamps are applied. A special baffle plate design creates turbulence which allows the system to achieve high disinfection levels. These UV systems can either be mounted horizontally or vertically into existing pipe lines and are equipped with a separate electrical cabinet.

ADVANTAGES

- Excellent and reliable disinfection capacity with low energy consumption
- High UV-C output of the lamps allows for a small number of lamps relative to the overall flow capacity
- Spektrotherm® low pressure / high intensity UV lamps have excellent temperature stability
- Long lamp life expectancy
- UV monitoring and control by a highly selective, calibrated UV sensor
- Optional automatic dose control system (Vario)
- Optional automatic quartz sleeve wiping system available
- Simple operation and easy maintenance

Electronic ballasts ensure that the Spektrotherm® HP UV lamps operate cost-effectively

UCA sensor

The new spectrum emission controller (SEC) handles all control and monitoring functions

All specifications are subject to change without notice.

(Hg) UV lamps contain mercury · Do not put in trash · Recycle or dispose as hazardous waste
